

Developer's Guide to Expression Blend

Ctrl THESE ARE THE KEYS TO USING BLEND SUCCESSFULLY
Alt IF YOU DON'T USE THEM,
Shift TOMMY WILL HIT YOU OVER THE HEAD WITH A TACK HAMMER

	Selection	V Selects a control on the Artboard and allows you to move its location, also shows adorners for resizing the control
	Direct Selection	A You should be hitting this a lot, it lets you select a control on the designer by clicking on it
	Pan	H Pans the artboard, double click to center currently selected control
	Zoom	Z Hold CTRL to select control (temporarily acts like selection tool) Drag to highlight a specific area of the screen, double click to zoom to actual size (use mouse wheel + control instead)
	Camera Orbit	O Dumb 3D Stuff
	Eye Dropper	I Clicking on a control with the eyedropper enabled will copy most of the properties to the currently selected control
	Paint Bucket	F Shouldn't really need this
	Gradient	G You are a developer, right? Do my eyesight a favor and don't play with gradients
	Pen	See the gradient tool
	Rectangle	Double click to insert a rectangle into currently selected control. Hold click or right click to change to Ellipse or Line
	Layout Panels	Double click to insert a panel into currently selected control. Hold click or right click to change panel type
	Text	Double click to insert a text control into currently selected control. Hold click or right click to change text control type
	Controls	Double click to insert a control into currently selected control. Hold click or right click to change control type
	Assets	Need a special control that isn't above? Click me!

- Search will filter visible properties
-  - click for advanced options - lets you reset value, pick bindings, create resources, etc
-  is set to a binding
-  is set to resource

So I had some whitespace, why not fill it with something funny?

- **Shift + Click** = select all controls between current selection and control you clicked on
- **Control + Click** = add control to selection
- **Control + Drag Control** = duplicate control and place inside the container it is dropped on
- **Blue outline** is the active container - double clicking on a control in the tools panel will add that control to the active container
- **Gray highlight** is active control
- **Toggling Eye Icon**  hides the element in blend only
- **Toggling Lock Icon**  prevents you from making any changes to the control's properties
- **Name your elements!**

Additional Resources

- **Ben Fry's PhD Dissertation** - <http://benfry.com/phd/>
Really easy to read (unlike Tufte)

Lots of different videos

Random Pointers

- In order to get Blend to act like every other graphic editor (Photoshop, Paint.Net, etc):
Go to Tools > Options > Artboard > Zoom by using = Ctrl + Mouse Wheel
- **Buy a Widescreen Monitor** - you need the extra width for the artboard!!!
- **When resizing a control, hold CTRL to keep the same aspect ratio**
- **When resizing a path, hold SHIFT to keep the same aspect ratio**
- **When drawing a line, or moving a line segment, hold shift to keep angle at 15 degree increments**
- **You can save the arrangement of your tabs by going to:**
Window > Save as New Workspace
- **You can switch workspaces by going to**
Window > Workspaces > (pick a named workspace)
- **You can hide all tabs to maximize Artboard by hitting TAB**
Will not work if the cursor is currently editing text
- **Learn about the visual state manager and about behaviors!**
